

[Exact paper title as published]

[Author One, Author Two and Author Three]

PUBLICATION YEAR	[Year]
JOURNAL / WORKING PAPER	[Journal, volume(issue), pages, or working paper series]
DOI	[DOI]
RESEARCH AREA	[Research area and subfield]
SERIES	[Series name exactly as in CLAUDE.md]
PAPER TYPE	[Theoretical, Empirical, Econometric, Computational, Experimental, Review, Methodological or Mixed]
REVIEWED BY	Arthur Faugeron
DATE REVIEWED	[D Month YYYY]

ANALYTICAL ABSTRACT

[One tight paragraph of about 150 to 220 words in the reviewer's own words: the question, the data or model, the method, the main finding and the main limitation. It must end as a complete sentence so that it fits on the front page.]

1 Introduction

1.1 Paper identification and classification

[Paper type, field and subfield, version of the paper read in full.]

1.2 Executive understanding

WHAT IS THE PAPER TRYING TO DISCOVER?

[Text.]

WHY DOES THE QUESTION MATTER?

[Text.]

WHAT WAS KNOWN BEFORE, AND WHAT IS MISSING?

[Text.]

WHAT DOES THE PAPER PROPOSE, HOW DOES IT INVESTIGATE, AND WHAT DOES IT FIND?

[Text.]

2 Research Problem and Hypothesis

2.1 Research question

PAPER [The precise question, not a topic description.]

2.2 Hypotheses

- [First hypothesis.]
- [Second hypothesis.]

2.3 Existing literature and research gap

[Text. Use the labels Paper, Evidence, Critique, Inference and Extension at the start of a paragraph so that the source of each statement is never ambiguous.]

2.4 Claimed contribution

CRITIQUE [Whether the claimed contribution is actually demonstrated.]

3 Theoretical Framework and Mechanism

3.1 [Model or mechanism]

PAPER [Every important equation must be shown, not only described.]

$$y_t = \alpha + \beta x_t + \varepsilon_t.$$

(1)

y_t

[Meaning of each symbol.]

x_t

[Meaning.]

β

[Meaning, sign and units.]

[What the equation says, which assumptions it needs, what it predicts, how the prediction is tested, and the derivation steps. Refer to it as Equation (1).]

4 Data and Empirical Strategy

4.1 Data

[Source, sample period, frequency, geography, observations, filters, transformations.]

Table 1. [Table caption]

Series	Construction	Sample	Observations
[Series one]	[Construction]	[Period]	[N]
[Series two]	[Construction]	[Period]	[N]

Source: [Origin of the numbers; say whether copied from the paper (official) or computed by the reviewer (generated).]

4.2 Empirical specification and identification

[Where does the identifying variation come from?]

4.3 Data limitations and biases

- [Survivorship, look-ahead, selection, measurement error, data mining.]

5 Results

5.1 [Main result]

EVIDENCE [What was tested, found, its magnitude, statistical and economic significance, and what it means in intuitive units.]

6 Robustness and Additional Tests

Table 2. Robustness tests: concern, test, result and assessment

Concern	Test reported	Result	Does it resolve the concern?
[Concern]	[Test]	[Result]	[Yes, Partly or No, and why]
[Concern]	[Test]	[Result]	[Assessment]

Source: [Origin].

7 Critical Evaluation

7.1 What the paper establishes

ESTABLISHED

[Claims strongly supported by the evidence.]

SUPPORTED BUT CONDITIONAL

[Claims that depend on assumptions or particular specifications.]

SUGGESTIVE

[Evidence consistent with a hypothesis but insufficient to establish it.]

NOT ESTABLISHED

[Claims the paper cannot demonstrate.]

7.2 Strengths

STRENGTHS RECOGNISED BY THE AUTHORS

- [Strength and why it matters.]

STRENGTHS IDENTIFIED INDEPENDENTLY

- [Strength and why it matters.]

7.3 Weaknesses and critique

SINGLE MOST IMPORTANT WEAKNESS

Problem. [Text.] **Why it matters.** [Text.] **Potential bias.** [Text.] **How it could be tested.** [Text.]

OTHER WEAKNESSES

- [Problem, why it matters, potential bias, test.]

8 Contradictions and Edge Cases

CRITIQUE [Conditions under which the result should disappear, extreme values, parameter dependence, alternative mechanisms, with direct reasoning or illustrative calculation.]

9 Further Literature

Table 3. Literature connections

Paper	Shared idea	Relationship	Why it matters
[Author (Year)]	[Idea]	[Preceded, contradicted, extended, applied]	[Reason]
[Author (Year)]	[Idea]	[Relationship]	[Reason]

Source: [Origin].

10 Research Gaps

10.1 Paper-level gaps

- **Gap:** [Text.] *Why it matters:* [Text.] *Existing limitation:* [Text.] *Way forward:* [Text.]

10.2 Literature-level gaps

- [Same four elements.]

10.3 Methodological gaps

- [Same four elements.]

11 Research Opportunities

- Idea 1. [Title]
- RESEARCH QUESTION. [Text.]
- MOTIVATION. [Text.]
- HYPOTHESIS. [Text.]
- ECONOMIC MECHANISM. [Text.]
- LITERATURE CONNECTION. [Text.]
- DATA. [Text.]
- VARIABLES. [Text.]
- METHOD. [Text.]
- IDENTIFICATION STRATEGY. [Text.]
- EXPECTED CONTRIBUTION. [Text.]
- MAIN RISK. [Text.]

11.1 Ranking

Table 4. Ranking of research ideas (scores from 1 to 5, assigned by the reviewer)

Idea	Novelty	Feasibility	Data	Method	Importance	Contribution	Total
[1. Idea]	[n]	[n]	[n]	[n]	[n]	[n]	[n]

Source: reviewer’s subjective scoring.

[The top three ideas and why.]

12 Learning Framework

12.1 Prerequisite concepts

- [Concept.]

12.2 Core concepts learned

- [Concept.]

12.3 Important equations

[Equations worth remembering, referred to by number.]

12.4 Methods learned

[Text.]

12.5 Questions to test understanding

COMPREHENSION

1. [Question.]

ANALYSIS

1. [Question.]

RESEARCH

1. [Question.]

12.6 Papers to read next

[Authors (Year); Authors (Year).]

13 Conclusion

13.1 One-sentence thesis

[Text.]

13.2 Three most important insights

– [Insight.]

13.3 Strongest evidence

[Text.]

13.4 Biggest weakness

[Text.]

13.5 Most important research gap

[Text.]

13.6 Best research opportunity

[Text.]

13.7 Three papers to read next

[Authors (Year); Authors (Year); Authors (Year).]

14 References

[Author, A., and Author, B. (Year). Title. *Journal*, volume(issue), pages. Add the version read, for example arXiv identifier and version.]

[Next reference, alphabetical by first author.]
